PROJECTS

Samastt (01/2024 - 03/2024)

- This product provides a comprehensive range of options for trading energy contracts, including Day Ahead, Real Time, Intra Day, and Weekly Contracts
- handling Renewable Energy Certificates. Additionally, it provides functionality for generating invoices, which is essential for financial transactions and record-keeping purposes
- Collaboration with clients resulted in the translation of needs and customization of components for business alignment.
- I have worked on the balance update module in this project, ensuring accurate and timely user balance updates.

Bulk Payment Processing Engine (PoC) (07/2023 - 12/2023)

- Engineered backend components for a bulk payment processing system utilizing Java, Spring Boot, and Spring Cloud technologies.
- Established database schemas and orchestrated data persistence mechanisms using MySQL to store metadata and instructions for payments
- Implemented reporting functionalities to generate PDF reports detailing successfully processed payments or rejected transactions.
- Devised batch processing strategies to amalgamate transactions based on designated criteria like Network, Debit Account, Value Date, Transfer Currency, and Charge Account.
- Developed logic to generate ISO 20022 response files, facilitating the processing of authorized payments for disbursement.

SmartContactManager (01/2023 - 04/2023)

- This Application is a digital tool designed to efficiently organize and manage contact information. Users can store and manage their contact information in a structured and easily accessible manner, making it simple to find and update contact details.
- Implementing a JWT-based login system provides secure user access and efficient resource authorization, enhancing security and performance by minimizing server-side authentication checks
